Case Study – Fresh Fruits

The owner of the company now want to create a website with a Registration page like given below to start off their new venture and to figure out the statistics as to how many customers would be interested to do an Online Fruit Shopping.

This is a prototype of the registration page.

Task - 1

The web page was left incomplete and requires some final touches to make it like expected.

The first major thing is the header background color is missing, and you can see the texts are not visible properly.

Change the **Background color** of the **Header** to black for which the color code is **#101010;**

<Hint:

Find out the **.header** class in the **registrationStyle.css** file and add the background color as:

background-color: #101010; **>**

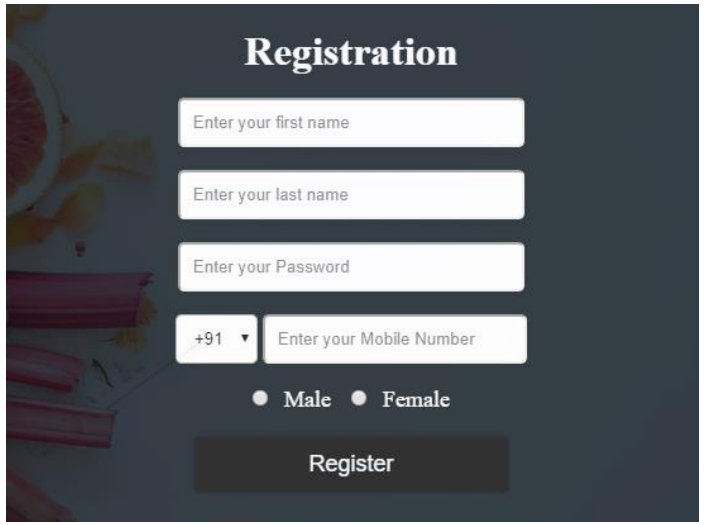
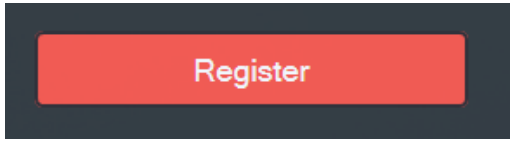
Task - 2

The background color of the **Registration Button** is black and is not visible with the panel background.



Change the color of the button like shown below so that it is visible and enhances the usability.



<HINT:

Find out the **#submitBtn** ID in the **registrationStyle.css** file and change the background-color to **#f0352c;** **>**

Task - 3

While Designing the site, they forgot to add the **Cart** link on the Navigation Bar.

Complete the Navigation Bar by adding the **Cart** link in the Header after the **About** Link.

<Hint:

Open the **RegistrationPage.html** file.

Find out the Navigation section under the <body> Tag, and add one more Hyperlink similar to the About Hyperlink. **>**

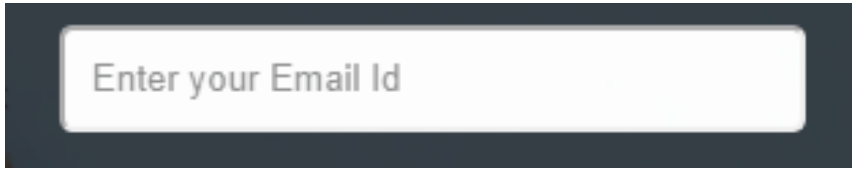
Task - 4

There is another problem with the web page, i.e. the **Input Box** for entering **Email ID** is missing.

Add one more Input Box, so that the User can enter their Email ID for Registering into the website.



<Hint:

1. Open the **RegistrationPage.html** file.
2. Find out the Input Box for Last Name inside the Registration Form.
3. Add another input box below that for Email.

Additonal Information:
type="email" validates the input for a proper email id.

placeholder contains the value which is displayed inside the Input Box. **>**

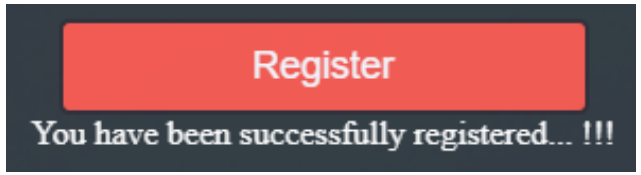
Task - 5

The users are not able to understand if they have been registered after clicking on the **Register** button.

Make sure they are able to see this message "**You have been successfully registered... !!!**" below the Register Button, once they click on the Register Button.



Steps:

1. Open the **RegistrationPage.html** file.
2. Find out which function is being called **onsubmit** of the Register Form.
3. Find the <script> tag and write the Function which needs to be called
   Sytax of function:
   function functionName(){
   //Function Body
   }
4. Inside the function write the following JS command:
   document.getElementById("submitMsgId").innerHTML = "Your Message";
