

## AJAX LAB – 1

**Q.** Use Ajax to fetch the ‘to-do list’ data from URL and display it.

**Step 1:** Create an HTML for the following:

**Step 2:** Create JS file and use AJAX to fetch the data from <https://jsonplaceholder.typicode.com/todos/1>

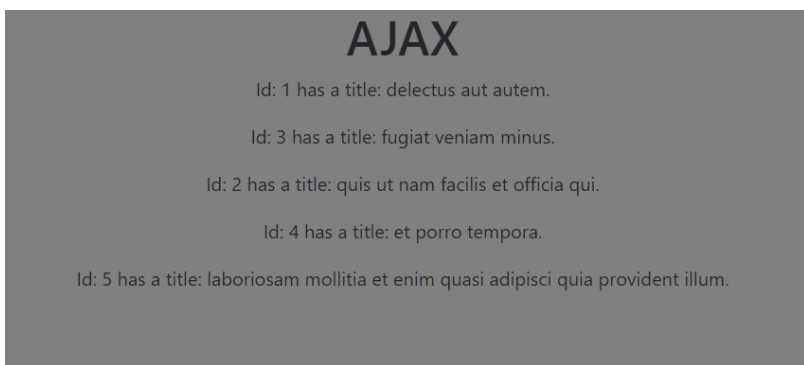

Response:

```
{
  "userId": 1,
  "id": 1,
  "title": "delectus aut autem",
  "completed": false
}
```

**Step 3:** Each time we click on ‘Fetch’ button, we should get the data and it should go from id 1 to id 5 of the url:

<https://jsonplaceholder.typicode.com/todos/> + “id”

**Step 4:** After the fifth response the button should be hidden.

**Step 5:** If the response has the “completed”: true then get the displayed text in green or else if it is false then displayed text should be in yellow.

**Topic Covered:**

- HTML, CSS
- JS, JS DOM
- JSON & AJAX
